EINDOPDRACHT

Alle code is te vinden in de eindopdracht.py file, ik heb gewerkt met een region systeem, elke region bevat een deel dat bij elkaar hoort. Voor de code referentie gebruik ik de lijn waar de region start.

Database opzetten:

CODE: LIJN 28

Stijl voor alle grafieken

CODE: LIJN 9

Data setup

CODE: LIJN 39

```
myCursor.execute("SELECT * FROM t_geleverd")
delivered = myCursor.fetchall()
delivered_arr = np.array(delivered);
del_types = [('date', 'M8[D]'), ('amount', int), ('manufacturer', 'U50')]
del_array = np.array(delivered, dtype = del_types)
myCursor.execute("SELECT * FROM t_gezet")
administrated = myCursor.fetchall()
administrated_arr = np.array(administrated)
ad_types = [('date', 'M8[D]'), ('first_dose', int), ('second_dose', int), ('region', 'U30'
)]
ad_array = np.array(administrated, dtype = ad_types)
myCursor.execute("SELECT * FROM t_gezet_epistat")
admin_epistat = myCursor.fetchall()
admin_epistat_arr = np.array(admin_epistat)
ad_epi_types = [('date', 'M8[D]'), ('region', 'U50'), ('agegroup', 'U15'), ('sex', 'U2'),
('brand', 'U50'), ('dose', 'U5'), ('count', int)]
ad_epi_array = np.array(admin_epistat, dtype = ad_epi_types)
```

Shared code
